

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

EDITORIAL.

THE TRANSFER of the National Herbarium from the building of the Department of Agriculture to the care of the Smithsonian Institution, and its storage in the National Museum, is a movement that commends itself to every botanist. That this great collection should so long have been exposed to destruction by fire does not reflect much credit upon our Congresses; and as the present arrangement seems to have been easily effected without any congressional action the long time exposure does not reflect much credit upon previous administrations of the Department of Agriculture. The Smithsonian Institution does not furnish more room, for the National Museum is already overcrowded, but it furnishes safety, and is the proper depository of government scientific collections. In the transfer, the collections of the Divisions of Vegetable Pathology and of Forestry are not included, and the Department of Agriculture also wishes to retain the grasses. In our judgment all of these collections should pass under the care of the Smithsonian Institution, for the same reasons obtain for their transfer as for the transfer of the other collections. The botanist of the Department of Agriculture retains his position of Curator, so that a transfer does not put any obstacle in the way of use. The collections of the Division of Vegetable Pathology and of Forestry are in charge of other curators, so that it may be well to preserve their autonomy, but the great and in many respects unique collection of grasses should certainly be included in the transfer.

THIS COMMENDABLE movement, however, is but a temporary expedient, for it means storage rather than working room. The Botanical Club, and the other organizations comprising the same body of botanists, through their annual resolutions on this subject, seem to have been effective thus far, and should be encouraged to continue their effort until a suitable building is provided on Smithsonian grounds. Much has already been done in the elimination of congressional clerks and replacing them with botanists. A building and an adequate corps of competent investigators are due such a collection as the National Herbarium. We trust that this matter will be taken up at every meeting of botanists, until the National Herbarium has a proper equipment of room and of men.
